Care & Maintenance for Your Concrete Floor Coatings

At Formula Concrete Coating, we want you to get lasting benefits from your newly coated floor. Just like maintaining a new vehicle's appearance, your floor coating will require regular maintenance. Your discipline, persistence and overall care will be great for its aesthetics but also great for your floor coating's health as well!

Tools Needed:

- Soft Broom / Dust Mop
- Mop / Stiff Bristle Brush
- Bucket / Mop Bucket / Hose
- Cleaning Vinegar

Care & Maintenance Basics:

- Day to Day Maintenance
 - Use a soft broom / dust mop to remove dust and dirt and restore your floor's shine
- Monthly
 - Mix 3 ounces of cleaning vinegar to 1 gallon of water
 - Using a mop and/or a stiff bristle brush, remove any spots, stains or debris
 - Hose down and/or thoroughly rinse
- As Needed
 - Immediately clean up spills, especially harsh chemicals like battery acid, oil, grease, gasoline, transmission fluid, brake fluid, paint thinner, etc.
 - Once spills are cleaned up, use a neutral cleaner to clean the area and rinse with clean water.

****Battery Acid** is especially harmful to your coating and may cause it to bubble. Please take special care with golf carts and other items that are charged overnight.

With a little prevention and minimal maintenance, your garage floor system can be enjoyed for years to come. Accidents do happen, so please don't hesitate to call our office for advice.

**Thank you for choosing Formula Concrete Coating
Austin's #1 Concrete Coating Specialists**
